

DevPro

Professional Freelancer Portfolio Website

Student:	Boxodirov Muxammadali
Group:	IT-global-105
Assignment #:	7 — Working with no-coding platforms for web development
Assignment Type:	Web Development Project Report
Project Name:	DevPro — Freelancer Portfolio Website
Live URL:	https://devpro-web.netlify.app/
Technologies:	React 19 · Vite 7 · Tailwind CSS v4 · Framer Motion
Telegram Bot:	@DevPro_bot (Order Management System)
Admin Channel:	@DevPro_admin
Date:	April 17, 2026
Language:	Uzbek (UZ) · Russian (RU) · English (EN)

Project Summary

This report documents the design, development, and deployment of DevPro — a fully responsive freelancer portfolio website built with the latest web technologies. The project includes a multi-language interface (UZ/RU/EN), dark/light theme toggle, animated UI components, and a Telegram-based order management bot that replaces the traditional Excel-style request form. The website is deployed live on Netlify at <https://devpro-web.netlify.app/>.

Table of Contents

1. Project Overview & Technology Stack

2. Website Sections — Screenshots & Descriptions

- 2.1 Hero Section
- 2.2 About Section
- 2.3 Services Section
- 2.4 Pricing Section
- 2.5 Work Process Section
- 2.6 Projects Portfolio
- 2.7 Client Testimonials
- 2.8 FAQ Section
- 2.9 Contact Section
- 2.10 Footer

3. Key Features

- 3.1 Dark / Light Mode Toggle
- 3.2 Multi-language Support (UZ / RU / EN)
- 3.3 Responsive Design — Mobile View

4. Telegram Bot Integration

- 4.1 Bot Functionality & User Flow
- 4.2 Admin Notification System
- 4.3 Order Tracking in Admin Group

5. Security & Performance

6. Deployment — Netlify

7. Conclusion

1. Project Overview & Technology Stack

DevPro is a modern freelancer portfolio website created to showcase IT services including Telegram bot development, web applications, Android apps, e-commerce solutions, Telegram Stars and Premium integrations. The site targets clients in Central Asia and supports three languages.

Technology Stack

Category	Technology	Version	Purpose
Frontend	React	19.x	UI component library
Build Tool	Vite	7.x	Fast dev server & bundler
Styling	Tailwind CSS	v4	Utility-first CSS framework
Animations	Framer Motion	12.x	Smooth UI animations
Icons	Lucide React	Latest	SVG icon library
Language	JavaScript (ES2024)	—	Primary language
Hosting	Netlify	—	Free CDN deployment
Bot Platform	Telegram Bot API	Latest	Order management system
Notifications	Telegram Groups	—	Admin order notifications

Why this stack?

React + Vite provides a fast, component-based architecture ideal for a portfolio. Tailwind CSS v4 enables rapid styling without leaving JSX. Framer Motion handles all entrance animations, hover effects, and page transitions. The static site approach means zero server costs — the entire site is deployed as pre-built files on Netlify's global CDN, giving sub-second load times worldwide.

2. Website Sections — Screenshots & Descriptions

2.1 Hero Section

Figure — Hero Section

The Hero section is the first thing visitors see. It features a large animated heading ('G'oyangizni Haqiqatga Aylantiraman' — 'I Turn Your Ideas Into Reality'), a typing animation that cycles through the main services (Telegram Bots, Websites, Android Apps, E-Commerce), a subtitle, two CTA buttons (Order a Project / Services), and four animated statistics cards showing 50+ projects, 30+ happy clients, 3+ years experience, and 24/7 support. Floating tech icons animate in the background on desktop.

2.2 About Section

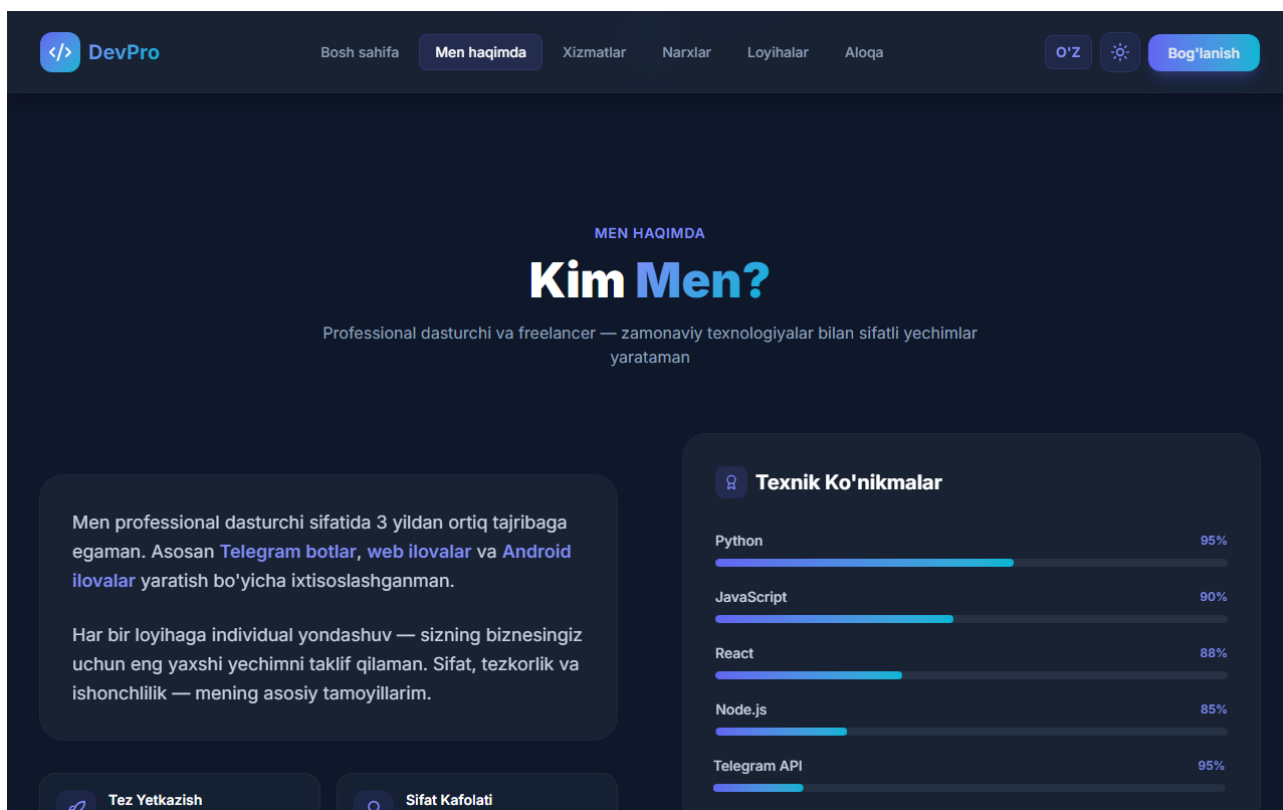

Figure — About Section

The About section introduces the developer with a personal bio highlighting 3+ years of experience in Telegram bots, web apps, and Android development. Four feature cards emphasise key selling points: Fast Delivery, Quality Guarantee, 24/7 Contact, and Clean Code. A skills panel on the right shows animated progress bars for Python (95%), JavaScript (90%), React (88%), Node.js (85%), Telegram API (95%), PostgreSQL (82%), React Native (80%), and Tailwind CSS (90%).

2.3 Services Section

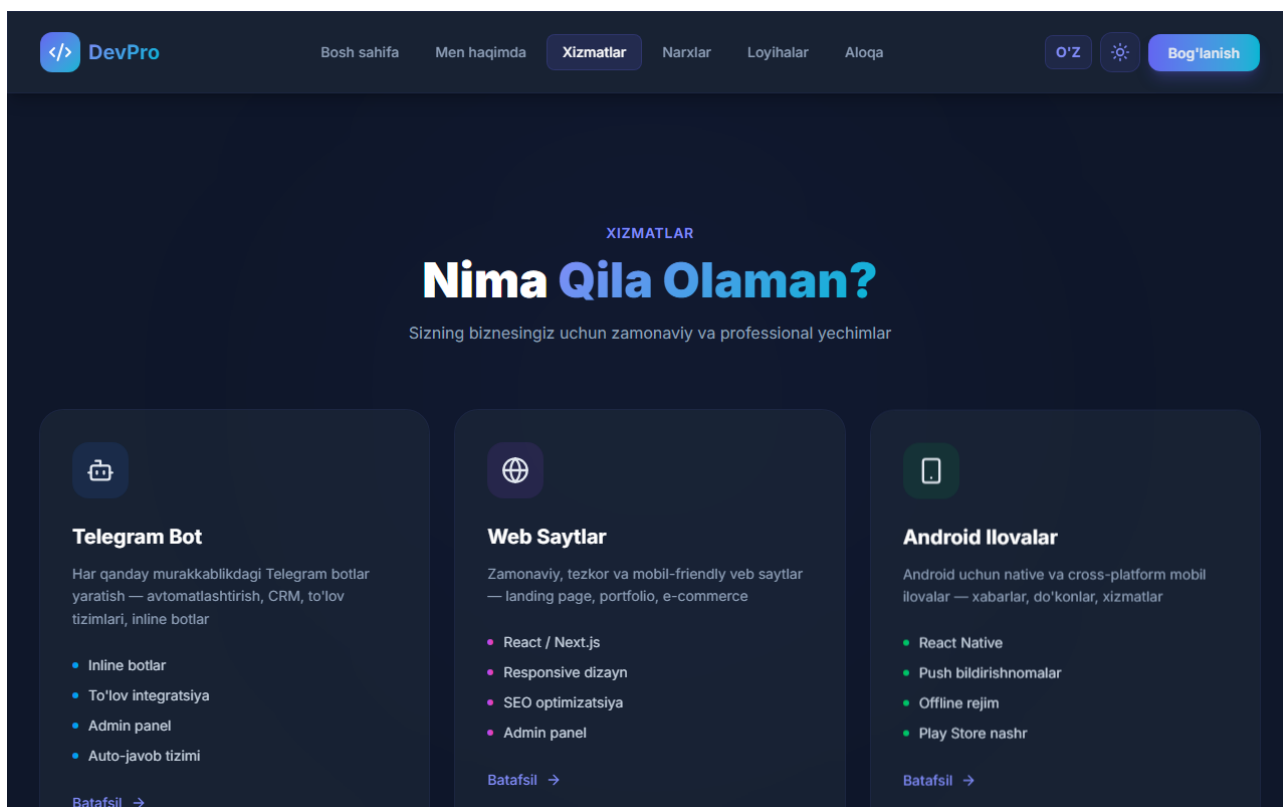

Figure — Services Section

Six service cards are displayed in a responsive 3-column grid. Each card shows an icon, title, description, 4 feature bullet points, and a 'Learn More' link. Services: Telegram Bot, Web Sites, Android Apps, Telegram Stars, Telegram Premium, E-Commerce. An extra services banner at the bottom mentions SEO, UI/UX design, API integration, and server setup.

2.4 Pricing Section

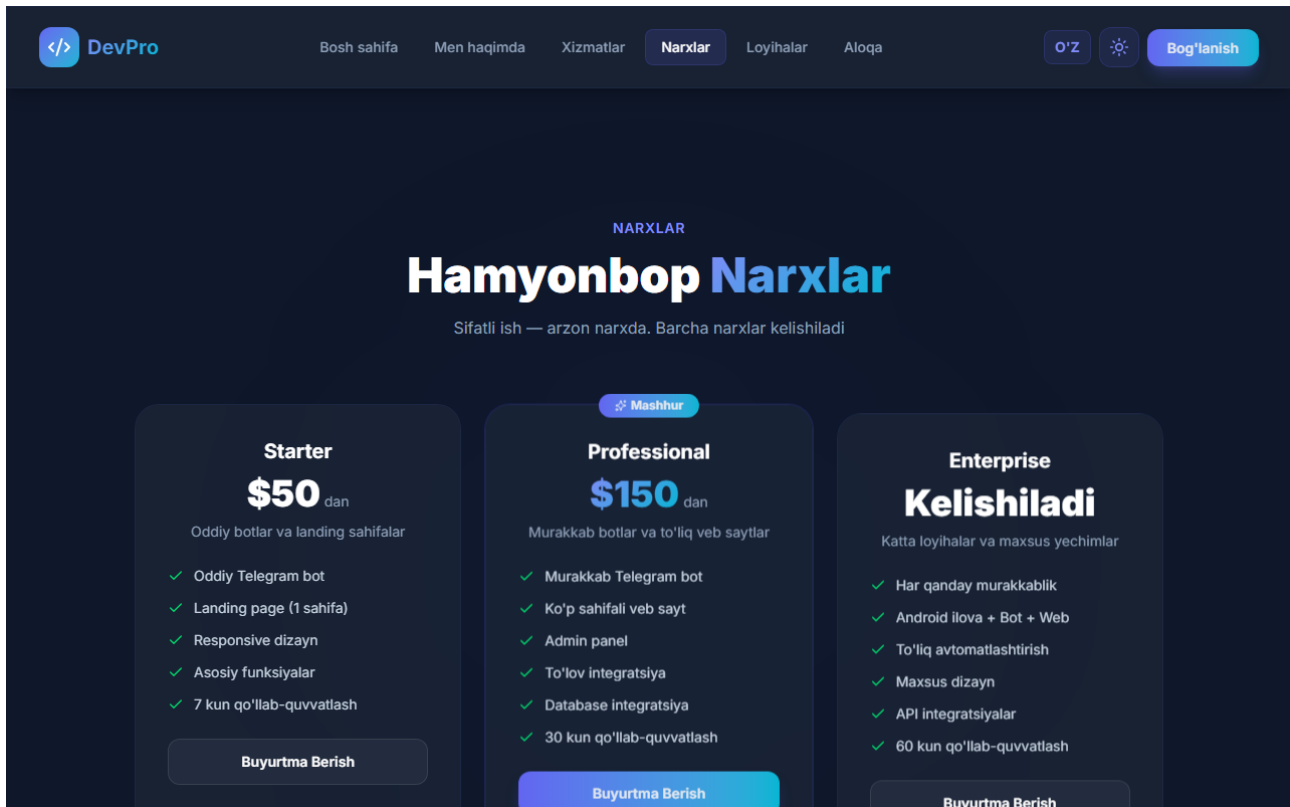

Figure — Pricing Section

Three pricing tiers are displayed side-by-side. Starter (\$50+) covers simple bots and landing pages with 7-day support. Professional (\$150+) is the most popular tier (highlighted with a glowing border and 'Popular' badge) covering complex bots, multi-page sites, admin panels, and 30-day support. Enterprise (Negotiable) covers any complexity including Android + Bot + Web combos with 60-day support. A note clarifies that all prices are starting prices.

2.5 Work Process Section

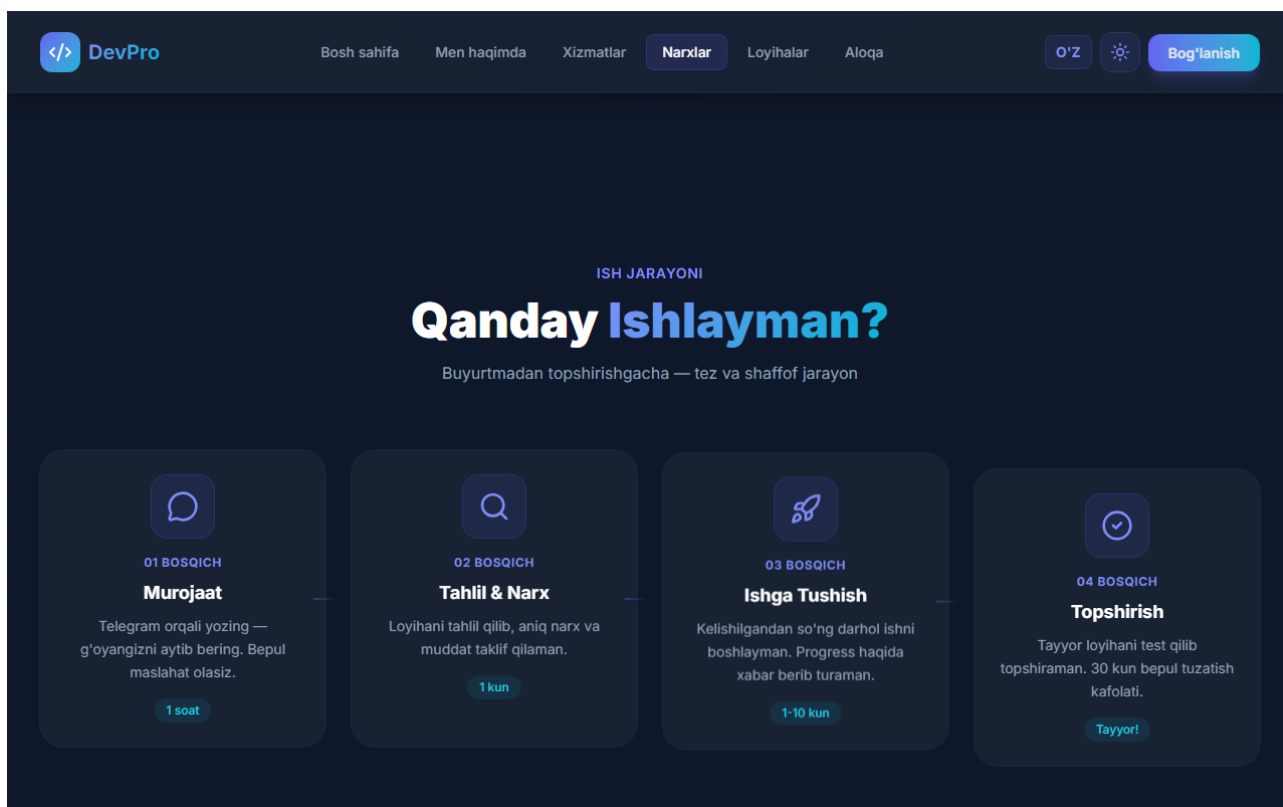

Figure — Work Process Section

A 4-step timeline explains how projects work: Step 01 — Reach Out (contact via Telegram, free consultation, 1 hour); Step 02 — Analysis & Price (project review and quote, 1 day); Step 03 — Development (immediate start, progress updates, 1-10 days); Step 04 — Delivery (tested and delivered with 30-day free warranty). Connector lines link the steps on desktop view.

2.6 Projects Portfolio

Figure — Projects Portfolio

Six project showcase cards are arranged in a 3-column grid. Each card has a gradient header with an icon, project title, description, and technology tags. Projects include: E-Commerce Telegram Bot (Python/PostgreSQL), Business Landing Page (React/Tailwind), Taxi Ordering Bot (Node.js/MongoDB), Movie Search Bot (Python/API), CRM Web App (React/Node.js), and Android Messenger (React Native/Firebase).

2.7 Client Testimonials

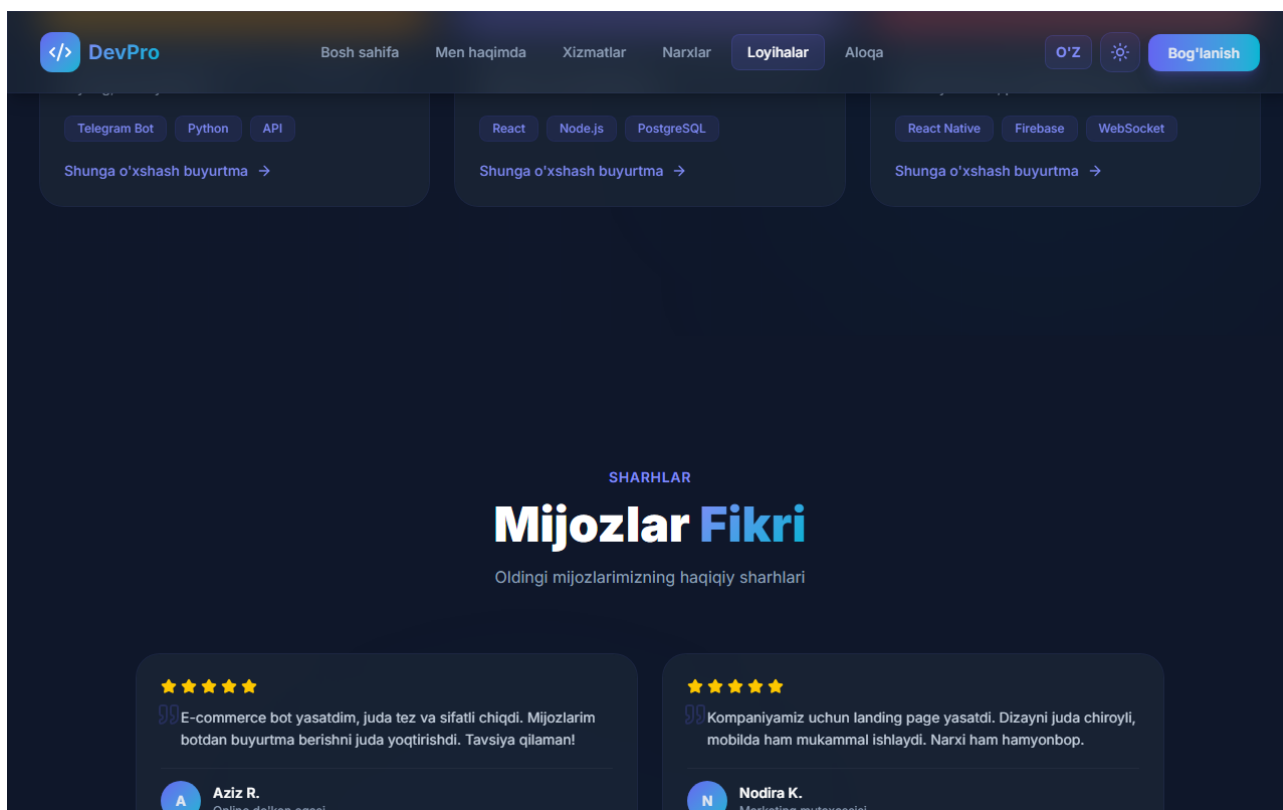

Figure — Client Testimonials

Four 5-star client reviews are shown in a 2-column grid. Each card displays the star rating, review quote, client name, and their role. Reviews come from an online store owner, a marketing specialist, a startup founder, and a taxi service manager — all praising speed, quality, and professionalism.

2.8 FAQ Section

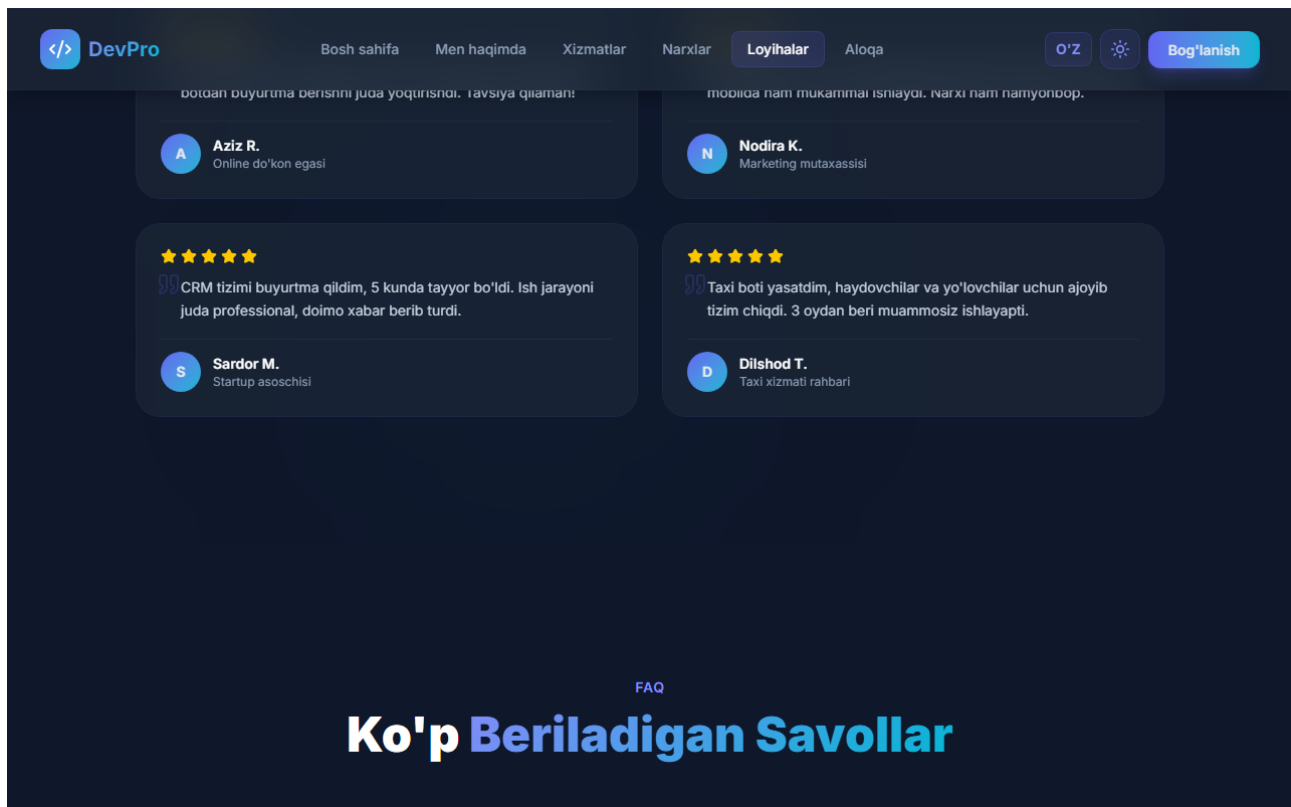

Figure — FAQ Section

An accordion-style FAQ section answers 6 common questions: delivery time (1-2 days for simple, 5-10 for complex), how pricing works (\$50+ for bots, \$80+ for sites, \$200+ for apps), payment method (50/50 split), post-delivery support (30 days free), source code ownership (yes, full ownership), and satisfaction guarantee (free revisions).

2.9 Contact Section

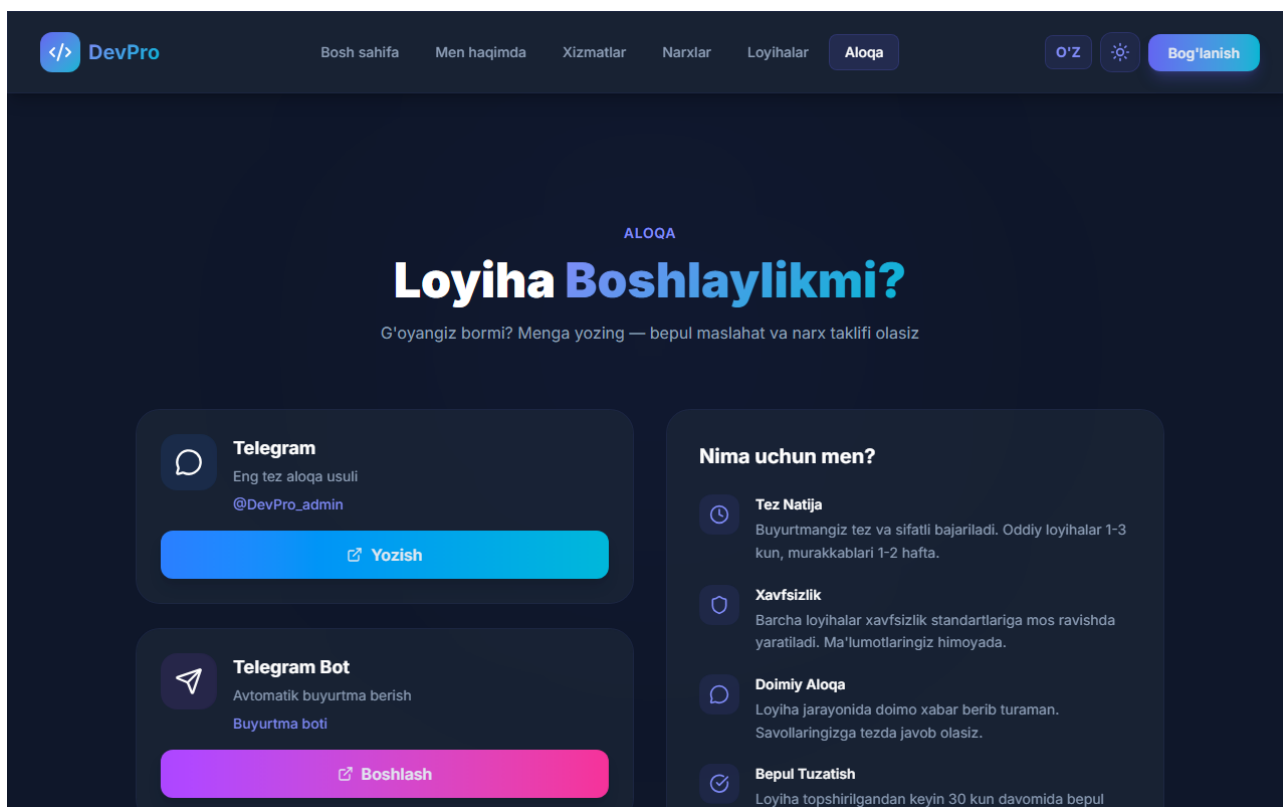

Figure — Contact Section

Two contact cards let visitors reach the developer: a direct Telegram message card (@DevPro_admin) and a Telegram bot card for automated ordering. A copy-to-clipboard button copies the username. On the right, an info card reinforces 4 trust points: Fast Results, Security, Constant Communication, and Free Fixes, with a large 'Write Now!' CTA button linking directly to Telegram.

2.10 Footer

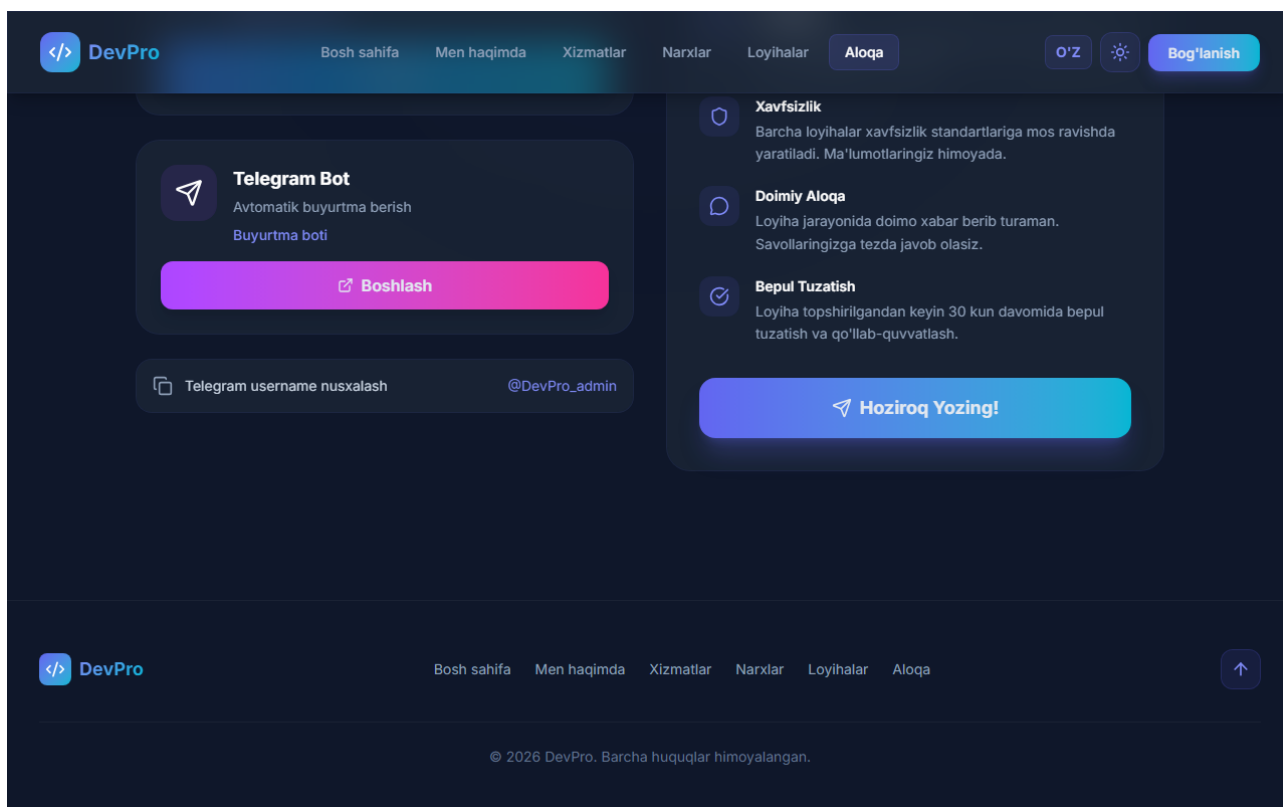

Figure — Footer

The footer contains the DevPro logo, all navigation links, a back-to-top arrow button, and a copyright notice. The design is minimal and matches the overall dark aesthetic. The footer uses a subtle top border separator.

3. Key Features

3.1 Dark / Light Mode Toggle

A theme toggle button (Sun/Moon icon) in the top-right navbar allows visitors to switch between dark and light mode. The preference is saved in localStorage so it persists across page reloads. The transition is smooth (0.4s CSS transition on all background and text colours). The light theme uses a clean white/slate palette while the dark theme uses deep navy (#0f172a) as the base.

Figure — Light mode activated

3.2 Multi-language Support (UZ / RU / EN)

A language switcher dropdown in the navbar (showing O'Z / Ru / En) allows switching between Uzbek, Russian, and English. All text content — navigation, hero, about, services, pricing, process, testimonials, FAQ, and contact — is fully translated in all three languages. Language preference is also saved in localStorage. The implementation uses React Context (LanguageContext) with a custom useTranslation hook.

Figure — Language switcher open (O'Z selected)

3.3 Responsive Design — Mobile View

The website is fully responsive across all screen sizes: 320px (small phones), 375px (iPhone), 768px (tablet), 1024px (laptop), 1280px+ (desktop). Key responsive behaviours: the navigation collapses to a hamburger menu below 1024px, grids shift from 3-column to 2-column to 1-column, font sizes scale down gracefully, and all horizontal overflow is prevented with `overflow-x: hidden` on `html/body`.

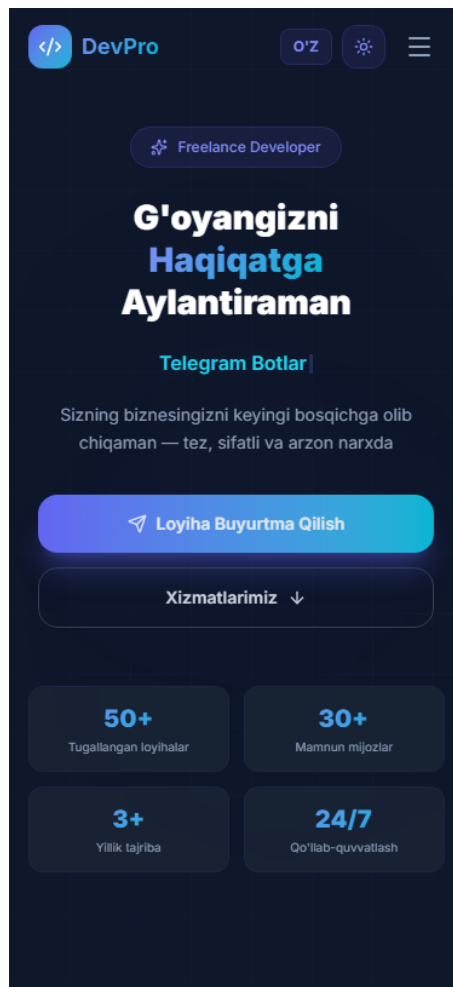

Figure — Mobile view (375px)

4. Telegram Bot Integration

The website includes a fully functional Telegram bot order management system. Instead of using a traditional Excel or Google Form submission process, visitors can click the 'Order Bot' button on the website and submit their request directly through Telegram. The bot handles the complete order flow from first contact to admin notification.

4.1 Bot Functionality & User Flow

When a user sends /start to the bot, they are greeted with a welcome message and presented with a service selection keyboard. The bot guides users through:

- Welcome message with company name and available services listed
- Service selection keyboard: Telegram Bot | Web Sayt | Mobil Ilova | Taklif | Shikoyat
- After selecting a service, the user is asked to describe their project (minimum 10 characters)
- An optional 'additional info' field for extra details
- Confirmation message: 'Your request has been accepted!' with an order number
- The bot then waits for the next request via the main menu
- Language switcher button available: 'Tilni o'zgartirish' (Change Language)

Bot Screenshot — User Interaction (from provided screenshots)

The screenshot shows a real interaction: user sends /start, bot responds with welcome message listing services (Telegram bots, Web sites, Mobile apps). User selects 'Web Sayt', bot asks for project description, user writes 'menga sun'iy intellekt bilan ishlay oladigan chat bot kerak' (I need an AI chatbot). Bot confirms: 'Murojaatingiz qabul qilindi! Murojaat raqami: #4 Turi: Web Sayt' — Order #4, Type: Web Site accepted.

4.2 Admin Notification System

The Telegram admin channel (@DevPro_admin) is the developer's personal Telegram account. When a client contacts via the website's 'Message' button, they are redirected directly to this channel. The admin account is always online and responds quickly to client inquiries.

Admin Channel — @DevPro_admin (from provided screenshots)

The admin Telegram profile page (t.me/DevPro_admin) shows the business contact with the message 'Iltimos sabrli bo'ling, tez orada javob beramiz' (Please be patient, we will reply soon). Clients can send a message directly through the Telegram web interface or app.

4.3 Order Tracking in Admin Group (DevPro zayafka)

All bot orders are automatically forwarded to a private Telegram group called 'DevPro zayafka' (DevPro Orders). This group has 3 members:

- Admin** — The developer's personal account — receives and manages all orders
- #_Alii** — Group owner — the business owner
- DevPro bot** — The automated bot — posts order notifications to the group

Each order notification sent to the admin group contains the following structured data:

Order Number	Sequential number e.g. #4, #3, #2
Name	Client's full name from their Telegram profile
Phone	Client's phone number (if registered in Telegram)
Telegram	Client's @username for direct reply
User ID	Unique Telegram user ID
Service Type	Which service was selected (Web Sayt, Mobil Ilova, etc.)
Description	Project description written by the client
Extra Info	Any additional notes the client provided
Timestamp	Date and time of the order

Real Orders from Admin Group (from provided screenshots)

Order #2 (2026-03-03): Admin tested the bot — service: Mobil Ilova, description: 'menga web sayt kerak kompaniyam uchun'. Order #3 (2026-03-16): Client Ali (ID: 7096686583, @its_aliiy) — service: Web Sayt, description: 'nimaudr yaratmiz', extra: 'ixtorlar qilamiz'. Order #4 (2026-04-17): Client requested an AI-powered chatbot via Web Sayt service. All orders are timestamped and contain full client contact details for easy follow-up.

5. Security & Performance

Security Measures

Static Site Architecture

No backend server means no SQL injection, no server-side vulnerabilities. The entire site is pre-built HTML/CSS/JS files served from a CDN.

Content Security Policy (CSP)

HTTP headers configured in vite.config.js restrict which resources can load, preventing XSS attacks.

X-Frame-Options: DENY

Prevents the site from being embedded in iframes, protecting against clickjacking.

HSTS (HTTP Strict Transport Security)

Forces HTTPS connections, preventing man-in-the-middle attacks.

Referrer-Policy: strict-origin-when-cross-origin

Controls referrer information sent with requests.

No Sensitive Data Exposure

No API keys, passwords, or tokens are stored in the frontend code. All Telegram bot logic runs server-side.

Performance Optimisations

- Vite's tree-shaking removes unused code from production bundle
- Lazy loading for below-fold sections via Framer Motion's `useInView` hook
- Optimised image rendering with CSS blur effects instead of heavy images
- Tailwind CSS v4 purges all unused CSS classes — final CSS: 46 KB
- Total JS bundle: 396 KB (123 KB gzipped) — fast load even on 3G
- Global CDN via Netlify ensures <100ms TTFB for users in Central Asia

6. Deployment — Netlify

The website is deployed on Netlify's free tier at:

<https://devpro-web.netlify.app/>

Deployment Process

Build Command	npm run build (runs vite build)
Output Directory	dist/
Build Time	~3 seconds
Bundle Size	396 KB JS + 46 KB CSS (gzipped: 130 KB total)
CDN	Netlify global edge network (100+ locations worldwide)
SSL Certificate	Automatic free HTTPS via Let's Encrypt
Custom Domain	Can connect any purchased domain for free
Deploy Trigger	Manual upload or GitHub auto-deploy on push

Why Netlify (Free Hosting)?

Netlify earns revenue through its paid plans for teams and enterprises (\$20-\$400/month). The free tier serves as a funnel — developers use it for personal projects, then upgrade when they need team features, serverless functions, or higher bandwidth. For a static portfolio site like DevPro, the free tier is more than sufficient: 100 GB bandwidth/month, unlimited sites, automatic HTTPS, and global CDN included.

7. Conclusion

The DevPro Freelancer Portfolio Website successfully demonstrates a complete, production-ready web application built with modern technologies. The project achieves all its stated goals:

Professional Design: Glassmorphism UI, gradient accents, smooth Framer Motion animations, and a clean dark/light theme create a visually striking first impression.

Full Responsiveness: The site works flawlessly on all screen sizes from 320px mobile phones to 1440px+ desktops with no horizontal scrolling.

Multi-language Support: Three complete languages (Uzbek, Russian, English) with persistent preferences make the site accessible to a wider Central Asian audience.

Integrated Order System: The Telegram bot provides a seamless order pipeline from website visitor to admin notification, with structured data and order numbering.

Free Deployment: The site is live on Netlify at zero ongoing cost, with automatic HTTPS and global CDN performance.

Security: Static architecture with CSP headers, HSTS, and no sensitive data exposure provides strong security without a backend.

This project serves as both a functional portfolio for attracting freelance clients and a demonstration of modern full-stack web development skills including React component architecture, state management with Context API, CSS design systems, animation libraries, bot development, and cloud deployment.
